

MAKE SURE YOUR ROOFING PROJECT GETS A **PROFESSIONAL FINISH**

OUR FULL
PRODUCT RANGE

SLATE REMOVAL MADE SIMPLE

May sees the arrival of the professional slate ripper to our ancillaries range. This proven tool in the roofers' armoury is ideal when undertaking refurbishment of a roof where there are damaged slates. Strong, yet simple in construction, the tool is designed to just cut the fixing nails and allow the damaged slate to be removed from the roof.

BENEFITS

Made of hardened and tempered steel it has the flexibility required to burrow under the slate and allow the nails to be simply ripped away and the slate removed and replaced. In addition it has the strength to tackle the toughest of nails in the most difficult to access areas of the roof.

WHEN TO USE

Perfect for repair work when the fixing nails on damaged slates need to be removed without disturbing or breaking other slates on the roof.

HOW TO USE

Just slip the blade under the slate so it hooks round the nail and pull back so it rips the nail out and allows the slate to be removed and replaced.
