

PRESERVING THE PAST

Midland Lead works with English Heritage and the National Trust, as well as church authorities, homeowners, architects and planners to ensure that each and every heritage project we're involved in gets the specialist attention it deserves.

Our approach to making sandcast lead gives you the best of both worlds. We make authentic sandcast lead, but we make it in a very professional, modern way. Our sandcast lead workshop has been purpose-built for the task and we use all the benefits of modern technology to ensure that our sandcast lead has just the right lead thickness; offers the right tensile quality; and gives that wonderfully authentic look.

Below a list of heritage projects (English Heritage, listed property homeowners, church authorities) where our sandcast lead has been successfully installed:
