

MAKE SURE YOUR ROOFING PROJECT GETS A **PROFESSIONAL FINISH**

## FLASHING CLIPS UP TO 20 TIMES FASTER THAN TRADITIONAL METHOD

A small, but mighty product, flashing clips were invented by roofer Jimmy Hall to help make the lives of professional roofers easier when securing lead flashing into pen joints of masonry. The easy-to-fit clip secures any flashing chase from 16-22mm and grips lead firmly in place.

### BENEFITS

These larger variants of fixing clips are efficient and easy to use, and because they can be applied up to 20 times faster than the traditional method of cutting and rolling scrap lead, they help busy roofers finish the job on time and to budget.

Not only convenient and time-saving, flashing clips also provide a beautiful and accurate finishing touch to work that cannot be matched by the traditional method.

They're the invention you'll wish you had thought of!

### WHEN TO USE

- To fix lead flashing into open masonry joints

### HOW TO USE A HALLHOOK

- Insert the clip in the chase with the 'H' uppermost
- Dress the clip into place
- Use lead sealant to point the flashing and give it a professional finish
