

# PATINATION OIL & CLEANING GEL

MAKE SURE YOUR ROOFING PROJECT GETS A PROFESSIONAL FINISH

VISIBLE WHITE  
CARBONITE OR  
ORANGE OXIDE STAINS

RESTORED AND  
PROTECTED LEADWORK

## PATINATION OIL AND CLEANING GEL – A ROOFING PROFESSIONAL'S BEST FRIEND

Any roofing professional who is committed to carrying out a high quality leadwork job will no doubt have patination oil and lead cleaning gel in their roofing toolkit. Patination oil protects new and restored lead roofs, while cleaning gel has the power to rid any unsightly stains and bring lead back to its former glory by removing grime and dirt. With this in mind, Midland Lead offers merchants an attractive counter display unit to highlight handy 125ml bottles of cleaning gel and patination oil at the point of sale.

### BENEFITS

The counter display unit allows merchants a chance to remind roofers of the importance of these two products. Both cleaning gel and patination oil are essential products for a roofer's toolkit and work hand in hand to restore and protect leadwork.

The small 125ml bottles in the display are a more convenient solution to large litre sized bottles which can be difficult to handle on roofs, particularly when working on delicate touch up jobs. A 125ml bottle of patination oil covers approximately 6.2m<sup>2</sup> of lead, and the cleaning gel bottle covers around 0.5m<sup>2</sup> of lead.

### WHEN TO USE

**Cleaning gel:** To remove white carbonite or orange oxide stains

**Patination Oil:** Once lead sheet has been put in place (before the end of the day's work)

### HOW TO USE

**Cleaning gel:** Use a nylon brush or fine wire wool to apply. Depending on the level of staining, more than one layer may be needed.

**Patination Oil:** Use a soft clean cloth to apply. Only one layer is needed.
